- Anandita Upmanyu 25215160
- Vidhi Dhawan 25215155
- Yashika Singhal 25215157

Overview– ESHINE is a modern fashion e-commerce platform integrated with an AI-powered backend that provides intelligent product recommendations and styling suggestions. The system is designed with a decoupled architecture, enabling independent development and scalability of frontend and backend services.

Frameworks / Languages / Libraries

- HTML
- CSS
- JavaScript
- React JS
- Python
- Node JS
- Git (Version Control)

🎯 Objectives

- To build a responsive fashion e-commerce website
- To integrate AI for personalized recommendations
- To demonstrate full-stack development using modern tools
- To create a scalable and modular system

🏗️ System Architecture

The project follows a client-server architecture:

- Frontend (Client Side):
- Displays UI and interacts with users
- Sends requests to backend APIs

- Backend (Server Side):
- Processes user requests
- Runs AI logic for recommendations
- Sends responses back to frontend
